Weekend Assignment in Java

1. Please find case 1 and mention the result for the mentioned statements using strings?

Case1 Code:-

Output:-

```
public class StringComparisonExample {
  public static void main(String[] args) {
     // String literals (pooled)
     String str1 = "Hello";
     String str2 = "Hello";
     // New String objects (not pooled)
     String str3 = new String("Hello");
     String str4 = new String("hello");
     // Using ==
     System.out.println("str1 == str2: " + (str1 == str2)); // 1. (same memory reference)
what's the result?
     System.out.println("str1 == str3: " + (str1 == str3)); //2. (different memory
references) what's the result?
     // Using equals()
     System.out.println("str1.equals(str3): " + str1.equals(str3)); //3. (same content)
what's the result?
     System.out.println("str1.equals(str4): " + str1.equals(str4)); //4. (case-sensitive)
what's the result?
     // Using equalsIgnoreCase()
     System.out.println("str1.equalsIgnoreCase(str4): " + str1.equalsIgnoreCase(str4));
//5. (case-insensitive) what's the result?
  }
}
```

```

int0bj1 == int0bj3: false
                                     intObj1.equals(intObj3): true
intObj1.equals(intObj4): false
```

3. Find case 3 and mention how Basic I/O resources are getting closed and the difference that you implemented earlier in the code - copyBytes.java?

Case3 Code:-

import java.io.BufferedReader;

```
import java.io.FileReader;
import java.io.IOException;
public class TryWithResourcesExample {
//Eliminating finally block to close resources.
  public static void main(String[] args) {
     // File path (adjust the path as needed)
     String filePath = "example.txt";
     // Traditional try-with-resources block
     try (BufferedReader reader = new BufferedReader(new FileReader(filePath))) {
       String line;
       while ((line = reader.readLine()) != null) {
          System.out.println(line);
     } catch (IOException e) {
       e.printStackTrace();
  }
}
```

Answer:-

Closing Basic I/O Resources

In **Case 3**, the code uses the **try-with-resources statement**, introduced in Java 7, to manage the closing of the BufferedReader resource. The main advantage of this approach is its ability to automatically close resources like file readers, writers, and streams once the try block completes, regardless of whether it exits normally or due to an exception

Key Differences:

• Explicit Closing: In the older approach, the resource (BufferedReader) must be closed explicitly in the finally block, requiring additional error handling in case closing fails.

• **Automatic Closing**: In the try-with-resources version, the resource is declared within the parentheses of the **try** statement, and it is automatically closed when the block exits, whether normally or due to an exception.

Updated code:

```
package Weekly;
import java.io.BufferedReader;
import java.io.FileReader;
import java.io.IOException;
public class TryWithResourcesExample {
//Eliminating finally block to close resources.
 public static void main(String[] args) {
    // File path (adjust the path as needed)
        String filePath = "C:/Users/tapan.k/Documents/Textdemo.txt";
    // Traditional try-with-resources block
    try (BufferedReader reader = new BufferedReader(new FileReader(filePath))) {
      String line;
      while ((line = reader.readLine()) != null) {
         System. out. println(line);
    } catch (IOException e) {
      e.printStackTrace();
    }
 }
```

Output:-

```

```

4. Find case 4 and mention the order for 1,2 and 3 using collections?

Case4 Code:-

```
import java.util.HashSet;
import java.util.LinkedHashSet;
import java.util.Set;
import java.util.TreeSet;
public class SetExample {
  public static void main(String[] args) {
    // Set 1. What's the order of elements?
    Set<String> hashSet = new HashSet<>();
    hashSet.add("Banana");
    hashSet.add("Apple");
    hashSet.add("Orange");
    hashSet.add("Grapes");
    System.out.println("HashSet: " + hashSet);
    // LinkedHashSet 2. What's the order of elements ?
    Set<String> linkedHashSet = new LinkedHashSet<>();
    linkedHashSet.add("Banana");
```

```
linkedHashSet.add("Apple");
linkedHashSet.add("Orange");
linkedHashSet.add("Grapes");

System.out.println("LinkedHashSet: " + linkedHashSet);

// TreeSet 1. What's the order of elements ?
Set<String> treeSet = new TreeSet<>();
treeSet.add("Banana");
treeSet.add("Apple");
treeSet.add("Orange");
treeSet.add("Grapes");

System.out.println("TreeSet: " + treeSet);
}
```

Output:-

```
